Phase 4 — Calendar & Reminders

Google Calendar two-way sync, iCal import, month/week/day views, standalone reminders with repeat support.

✓ Complete

📅 Month View

6-row × 7-col grid. Event color pills (up to 3 per day). "+N more" opens DayEventsModal. Clicking day number navigates to Day view. Overflow from prev/next month shown dimmed.

📆 Week View

Full time-grid with 56px hourly rows, absolute-positioned event blocks, sticky day headers, current time red line indicator. Clickable day numbers go to Day view.

🗓️ Day View

24-hour timeline. All-day events in header area. Timed events positioned absolutely by start + duration. Current time indicator with red dot + line.

🔄 Google Calendar Sync

OAuth2 via googleapis. Syncs events into Whoami. Two-way: events created in Whoami push to Google Calendar. Auto-sync on page load (once per session). Manual sync button.

📥 iCal Import

Upload .ics files to bulk-import events. Parsed server-side, stored as CalendarEvent records with source="ical". Supports VEVENT format with DTSTART/DTEND.

🔔 Reminders

Due date + time, optional notes, repeat (daily/weekly/monthly). Mark done → moves to Completed section. Standalone /reminders page + calendar sidebar panel. Overdue highlighted in red.

Event Colors

Events have 8 color options. Google events map colorIds 1–11 to named colors. Source-based fallback: local=indigo, google=blue, ical=purple.

indigo · blue · green · yellow · orange · red · purple · pink

API Routes

GET	/api/calendar/events	List events in date range (start/end params)
POST	/api/calendar/events	Create event locally + push to Google Calendar
DEL	/api/calendar/events/[id]	Delete event locally + remove from Google Calendar
GET	/api/calendar/google/status	Check if Google Calendar is connected

GET	/api/calendar/google/connect	Generate Google OAuth2 URL (scope: calendar)
GET	/api/calendar/google/callback	Handle OAuth2 callback, store tokens
POST	/api/calendar/google/sync	Pull latest events from Google Calendar
DEL	/api/calendar/google/disconnect	Remove connection + delete synced events
POST	/api/calendar/import	Import .ics file (multipart/form-data)
GET	/api/calendar/reminders	List pending, overdue, and recently done reminders
POST	/api/calendar/reminders	Create reminder with title, notes, dueAt, repeat
PATCH	/api/calendar/reminders/[id]	Update reminder (mark done, change due date, etc.)
DEL	/api/calendar/reminders/[id]	Delete reminder permanently
